OBJECTIVE

I build the platforms businesses run on. Over the last 5 years I've shipped a multi-tenant SaaS booking marketplace, an online insurance marketplace, and ERP systems used across 6+ countries — taking each from empty repo to real users. I work full-stack across Next.js, Vue, NestJS, FastAPI, and PostgreSQL, and I'm at my best architecting multi-tenant systems that handle payments, real-time operations, and scale. Looking for an ambitious team building products that thousands of businesses depend on.

EDUCATION

Bachelor of Science (BSc), Westminster International University in Tashkent 2020 - 2024

Relevant Courses: Computer Science Fundamentals, Distributed Systems and Cloud Computing, Software Quality, Performance and Testing, Database Systems Development.

SKILLS

Languages	TypeScript, JavaScript, Python
Frontend	Next.js, React, Vue 3, Remix, Tailwind CSS, Zod, Pinia
Backend	NestJS, FastAPI, Django, REST APIs, WebSocket, Prisma
Databases	PostgreSQL, MongoDB, Redis
Integrations	Click, Payme, Telegram Bot & Mini Apps, Meta Graph API, SMS/OTP
DevOps & Tools	Docker, Nginx, Linux, CI/CD, GitHub Actions, RabbitMQ, PM2
AI & Workflow	Claude Code, AI-assisted development, LLM integration

EXPERIENCE

Founder & Full-Stack Developer Jun 2025 - Present
BookUp (bookup.uz) *Tashkent, Uzbekistan*

- Built a multi-tenant booking & business-management SaaS serving 20+ service businesses (barbershops, salons, billiards clubs), spanning a Telegram mini-app for owners, a customer-facing Next.js booking site, and a NestJS/PostgreSQL backend.
- Built an Instagram automation suite (comment/DM auto-replies, ice breakers, and AI-powered replies) on the Meta Graph API, turning social engagement into bookings.
- Designed and shipped end-to-end payments with Payme: a per-user prepaid wallet that auto-deducts SaaS subscription fees from top-ups.

Full-Stack Developer Jan 2022 - Present
InterRail Central Asia *Tashkent, Uzbekistan*

- Developed and maintained multiple custom ERP systems to automate core business processes, including accounting (acts, contract management), KPI tracking, and inquiry handling.
- Led development of an AI-powered document processing tool that reads scanned documents, extracts relevant data, and stores it in a structured database — eliminating manual Excel entry.
- Built a KPI monitoring system for the sales department to evaluate team and individual performance metrics.

Backend Developer Intern Feb 2022 - Aug 2022
InterRail Central Asia *Tashkent, Uzbekistan*

- Developed unit tests using pytest for a Django project, improving code reliability and quality.
- Optimized the process for handling orders, significantly reducing processing time.

PROJECTS

BOOKUP — Online Booking Platform (SaaS). Founder & full-stack developer of a multi-tenant booking and client-management SaaS for service businesses. Integrated Payme payments and Instagram auto-reply automation. Built with Next.js, NestJS, and PostgreSQL. (bookup.uz)

MyPolis — Insurance Marketplace. Full-stack developer of a marketplace where customers buy insurance policies in one place and insurance companies join as listed partners. Delivered payment processing, point-of-sale systems, contract management, an admin panel, and business reporting. (my-polis.uz)

InterRail — ERP for International Logistics. Full-stack developer of ERP and CRM platforms built from zero to fully automate core business processes for an international rail-freight logistics company. Built with Vue.js, Next.js, Django, and Docker Compose. (system.interrail.uz)

Do'mbirobod City — Enterprise Landing Page. Front-end developer of a professional landing page for a local real estate company, featuring apartment floor plans, virtual tours, and a price calculator. Built with Next.js and Figma-based UI/UX prototyping. (dombirobod-city.uz)

Baxtiyor Oila — Matchmaking Platform (Telegram Mini Apps). Full-stack developer of a matchmaking service for the Uzbek community in Germany, delivered as user-facing and admin Telegram Mini Apps with a profile-matching algorithm. Built with React, a Go API backend, and a Python notification bot.
